

PROFESSIONAL SUMMARY

Dual-track professional combining a BSc in Biochemistry with completed frontend web development training, equally equipped to deliver in technology and healthcare or scientific environments. Builds responsive, production-grade websites with HTML5, CSS3, Tailwind CSS, JavaScript, React, and Supabase, with nine live client and personal deployments managed end to end from design through launch, several of which now include realtime data, PWA installability, and AI-assisted features shipped as continuous post-launch updates rather than one-off builds. Brings four years of hands-on experience in clinical laboratory science and health insurance operations, including medical biochemistry and microbiology work such as biochemical assays, hematological evaluations, microbiological cultures, and phlebotomy, alongside quality assurance under regulatory SOPs and patient and provider liaison duties at a state health insurance agency. Strong analytical thinker with meticulous attention to detail, fast adaptability across disciplines, and a consistent record of independent ownership of projects and responsibilities. Seeking technical, scientific, or operational opportunities, locally or internationally, on site, hybrid, or fully remote.

- Analytical Problem Solving
- Precision & Quality Assurance
- Fast, Independent Learner
- Clear Written & Verbal Communication
- Cross-Functional Collaboration
- End-to-End Ownership
- Meticulous Attention to Detail
- Adaptability Across Industries

CORE SKILLS

WEB DEVELOPMENT

- HTML5, CSS3, Tailwind CSS, JavaScript, React
- Supabase: realtime data, auth, storage, SQL migrations
- PWA build-out: install prompts, offline queues, push notifications
- Responsive, mobile-first, cross-browser design
- Design, build, and deployment on Netlify, Vercel, and GitHub Pages
- Git and GitHub version control
- End-to-end project management, from scoping to launch and ongoing iteration

Also fluent in clear written and verbal communication, interpersonal collaboration, problem solving, and adaptability across fast-paced, multidisciplinary environments.

SCIENCE & HEALTHCARE OPERATIONS

- Biochemical assays, spectrophotometry, chromatography
- Hematological evaluation and microbiological culture
- Phlebotomy and specimen collection and processing
- Quality assurance and SOP or regulatory compliance
- Patient enrollment, claims review, provider liaison
- Data collection, analysis, and reporting; EHR and lab software, MS Office

PROFESSIONAL EXPERIENCE

Social Media Manager

Jun 2026 to Present

First Experts Logistics Solutions Limited, Ikeja, Lagos

- Manage and grow the company's presence across Instagram, X, Facebook, LinkedIn, and TikTok, building brand digital footprint largely from scratch.
- Create and schedule content around the company's services: freight forwarding, customs clearance, air and sea cargo, door-to-door delivery, and warehousing.
- Engage with followers, respond to enquiries, and drive brand awareness for a B2B logistics company serving Nigerian and international importers and exporters.
- Rebuilt the company website, firstexpertslogistics.com, from an outdated WordPress build into a modern, fully responsive site, managing design through deployment independently.

Freelance Frontend Web Developer

2025 to Present

Self-employed, Lagos, Nigeria

- Design and develop responsive, multi-page websites for independent clients across e-commerce, hospitality, brand identity, productivity software, nonprofit, and healthcare or corporate sectors.
- Manage projects end to end, from layout and content structure to responsive styling, testing, and deployment, across nine live builds to date (see Selected Projects), several with continuous post-launch feature updates.
- Built and continue to maintain a multi-page website for a healthcare or therapy services client, owning structure, layout, and iterative design refinement.
- Handle client acquisition and outreach independently, including marketing services via social media.

NYSC, Provider Service Officer (PSO), Rauf Aregbesola Health Center

May 2023 to Jul 2024

Lagos State Health Insurance Agency (LASHMA)

- Served as key liaison between healthcare providers and LASHMA, ensuring timely, accurate communication on insurance protocols and patient care.
- Guided patients through enrollment, eligibility, and benefits, improving access to healthcare services.
- Reviewed patient services and claims for compliance, resolving discrepancies with empathy and professionalism.
- Collected and analyzed service delivery data to identify trends and drive operational improvements.

Laboratory Scientist

Apr 2021 to May 2023

God Own Hospital, Oshodi, Lagos State

- Conducted biochemical assays, hematological evaluations, and microbiological cultures to support accurate diagnoses, covering core medical biochemistry and microbiology workflows.
- Drew blood samples from patients and performed phlebotomy as required, alongside specimen handling and processing.
- Maintained laboratory equipment through routine calibration and troubleshooting, and implemented quality control measures and SOPs in line with regulatory standards.
- Collaborated with physicians and nurses to interpret results and inform treatment plans.

Laboratory Intern

Sep 2019 to Mar 2021

Paelon Memorial Hospital, Victoria Island, Lagos

- Gained hands-on experience in specimen collection, processing, and biochemical testing under senior supervision.
- Supported quality assurance activities, contributing to reliable and accurate test results.
- Helped develop patient-facing educational materials on laboratory procedures.

SELECTED PROJECTS

Boardly

justixxprime.github.io/boardly

A kanban-style productivity application built and deployed as a real working tool, not a static demo, with data persistence and multi-device sync handled through Supabase, and now installable as a full PWA.

- Drag-and-drop kanban board with columns, calendar view, levels, streaks, and a Groq-powered AI assistant for task suggestions and a daily digest.
- Realtime multi-board sync across devices via Supabase, with checklists/subtasks, recurring tasks, file attachments, an offline queue, and public share links.
- **Shipped a real alerts system since launch: a loud in-app alarm, timezone-correct reminders, and auto-advancing task status on a schedule, plus a genuine PWA install flow with push notifications.**
- **Rebuilt the visual identity as a proper design system ("Drafting Desk"):** a deliberate type and color language replacing default Tailwind styling, so the product now looks like Boardly instead of a starter template.

Built with: HTML5, CSS3, JavaScript, Supabase, Groq AI

Fernhollow

justixxprime.github.io/fern hollow-booking-website

A boutique forest cabin and lodge booking platform covering the full guest journey from discovery to confirmation, now spanning nearly 30 pages.

- Stay search, side-by-side comparison, and a custom-built date picker for availability, with gift cards, a rewards program, and a host-facing dashboard.
- Custom-designed confirmation dialogs replacing native browser popups for a polished, on-brand feel throughout the booking flow.
- **Added ten "no paid API" features built on real math and browser capabilities instead of hosted services:** a solar-position sunrise/sunset countdown per stay, an ambient soundscape synthesized live with the Web Audio API, a speech-narrated photo walkthrough, and a rule-based AI concierge, each clearly labeled for what it actually is.
- **Added a gift registry and an experiences add-on cart with full create, edit, and delete, an Accessibility page, and a full responsive pass across phones, tablets, and small laptops.**

Built with: HTML5, CSS3, JavaScript, Web Audio API

Amani Community Trust

justixxprime.github.io/amani-community-trust

A nonprofit website for a community organization operating across East Africa, grown from an 8-page starting point into a 22-page, fully animated, installable web app.

- Dedicated pages for programs, measurable impact reporting, volunteer sign-up, a 9-article field journal and news section, and a 4-step donation flow with progress tracking.
- A right-side sliding mobile menu, rebuilt from the ground up after root-causing a CSS containing-block bug that broke full-screen navigation on phones.
- **Removed the site's dependency on an external CDN by compiling its full styling system (roughly 270 rules) into a local file, closing off a whole class of load-order bugs, alongside dark mode, an installable PWA flow, and native cross-page transitions.**
- **Fixed 12 unlinked form labels and 135 icon-only buttons for screen readers, added full SEO essentials (structured data, sitemap, Open Graph), and cut total image weight from 50MB to under 5MB via WebP conversion.**

Built with: HTML5, CSS3, Tailwind CSS, JavaScript, Web3Forms

Stride

justixxprime.github.io/stride

A shoe brand concept demonstrating how far a complete e-commerce experience can be taken with plain HTML, Tailwind CSS, and hand-written JavaScript, no framework and no backend.

- Full shopping flow: product catalog, cart, multi-step checkout, and account pages, plus a build-your-own sneaker configurator with layered, swappable part imagery.
- Hand-rolled state management for cart and account data with zero external dependencies.
- **Fixed an invisible-icon bug in the navigation by rebuilding it with SVG icons, redesigned the tablet menu, and compressed all product video and imagery for faster loading.**

Built with: HTML5, CSS3, Tailwind CSS, JavaScript

Pulse Analytics Dashboard

justixxprime.github.io/pulse-analytics-dashboard

An e-commerce admin dashboard built to look and behave like production software a real store owner would use daily.

- KPI summary cards and animated charts for at-a-glance performance tracking.
- Searchable, sortable best-sellers table plus dedicated views for orders, customers, discounts, and content.
- A command palette for fast, keyboard-driven navigation across the whole dashboard.

Built with: HTML5, CSS3, Tailwind CSS, JavaScript

First Experts Logistics Solutions Website

firstexpertslogistics.com

Full website rebuild for a Lagos-based freight forwarding and customs clearance company, replacing an outdated WordPress site with a modern, responsive build from the ground up.

- Service pages covering freight forwarding, customs clearance, air and sea cargo, and warehousing.
- Built and deployed independently end to end, from information architecture to launch, and continue to own it as an active client site.

Built with: HTML5, CSS3, Tailwind CSS, JavaScript

ShelemJ Resources Ltd Website

justixxprime.github.io/shelemj-website

A 21-page website for a Lagos-based African food export company established in 2013, built to a luxury black-and-gold brand aesthetic.

- Full site architecture spanning service pages, product listings, and a 3-article blog, with a consistent luxury visual identity carried across every page.
- **Added Organization and FAQPage structured data for richer Google search results, ran real WCAG contrast-ratio audits and fixed two genuine AA failures, and rebuilt every favicon and social share image from the client's actual logo.**

Built with: HTML5, CSS3, Tailwind CSS, JavaScript

Cheliv Compassionate Care Plus Inc.

BUILT DURING TRAINING, 2025

Multi-page marketing website for a home healthcare provider, designed to feel trustworthy and easy to navigate for visitors who may be stressed or in a hurry.

- Service pages and disease management program listings.
- A working request-information intake form connecting visitors directly to the care team.

Built with: HTML5, CSS3, Tailwind CSS, JavaScript, React

E-Commerce Showcase Site

BUILT DURING TRAINING, 2025

A self-directed storefront project built to sharpen frontend fundamentals rather than for a client.

- Clean, structured product layout with a shopping experience tuned for both phone and laptop.

Built with: HTML5, CSS3, Tailwind CSS, JavaScript

EDUCATION

Frontend Web Development

Completed Jan 2026

Digital Fortress Institute, Lagos, Nigeria

Completed hands-on training in HTML5, CSS3, Tailwind CSS, JavaScript, and React; built and deployed a responsive e-commerce site as a capstone project.

BSc Biochemistry, Second Class Lower (2:2)

2014 to 2018

Abia State University, Uturu, Nigeria

Coursework in organic chemistry, molecular biology, enzymology, and metabolic pathways; laboratory research on enzymatic reactions and biochemical assays.

Titus Jane High School, Lagos, Nigeria; West African Examinations Council (WAEC)

Achieved strong results across core and science subjects, providing the academic foundation for university study in Biochemistry.

CERTIFICATIONS

- Frontend Web Development Certificate, Digital Fortress Institute, January 2026
- National Youth Service Corps (NYSC) Certificate, 2023 to 2024
